

IMPS

INDUSTRIAL MANAGED PRINT SERVICE

DATASHEET

Paying for what you use is a business model that dominates business printing. Vanomation has pioneered this concept for industrial barcode printing and is proud to offer the Vanomation Industrial Managed Print Service. With IMPS, our client pays for the labels they use each month. The charge for the labels

covers the installation and servicing of the printers (standalone and/or automated print applicators) plus the consumable print heads and ribbons.

IMPS is offered in three packages:

IMPS-3

36-month period, including all hardware, software, services and consumables.

IMPS-4

48-month period, including all hardware, software, services and consumables.

IMPS-5

60-month period, including all hardware, software, services and consumables.

BENEFITS OF IMPS

Eliminate Upfront Capital Expenditures

Gaining approvals to budget significant capital expenditures typically requires extensive justification and consumes management time. By amortizing the cost of the capital equipment across all the labels used in the facility, the client pays for the capital equipment as it is being used, rather than paying in advance.

Budget & Expense Management

By signing-up for a Vanomation IMPS package, our clients know exactly what their monthly expenses will be. As business levels rise and fall, the monthly expense is determined by the number of labels used. There are no surprise capital budget requests for new printers or unexpected invoices for the repair of failed equipment. Everything is taken care of for the period our client signs-up for.

Print Quality

Managing print quality requires constant attention to the variables that can negatively impact the production of your barcode labels. This includes the print head, the print engine, ribbon compatibility, label adhesive and label finish. If any of these variables are out of specification, the result can stop your production line or delay your shipping deadlines. With IMPS Vanomation takes over the management of these variables so you can focus on your main job of getting products shipped.

Managing Label Mix

It is typical in today's industrial environment to source a number of different labels from multiple suppliers to handle different requirements such as temperature, image durability, adhesive qualities and finish. Vanomation can wrap all these different requirements into a single monthly payment that off loads your staff.

Service & System Updates

Implementing IMPS means that Vanomation ensures all hardware and software used as part of your industrial labeling system are up to date and within specification. Your staff members have a single supplier to rely on for the ongoing services to support your factories and warehouses.

IMPS COMPONENTS

PRINT STATIONS

IMPS encompasses the Vanomation RPA2000, LPA1000 and Printronix T8000 print stations, including upgrades such as 6" and 8" printer widths, 2D barcode validation and RFID. The print head consumables are also included as part of the IMPS program.

RIBBONS

For those clients using thermal transfer technology, Vanomation will supply the ribbon type (wax, resin or wax-resin) qualified for the label finish and durability required.

LABELS

With IMPS, Vanomation supplies all the labels needed for each application in your factory and warehouse. Initial qualification of the label and ongoing supplier management is included as part of the package.

SERVICES

- Initial installation of print stations
- Preventative maintenance and repairs to the print stations
- Upgrades and enhancements to software
- Administrative services (supplier management, invoicing & collections)

EXCLUSIONS FROM IMPS

Relocation or re-installation of print stations

Repairs required as a result of accidental or intentional damage

Upgrades required as a result of enterprise/warehouse system changes
